

Fruit Catalog 2016

Berry/Small Fruit

Blackberry 'Thornless Triple Crown'

Rubus

Part to full sun

5' tall

Pollinator needed? No, it is self-fertile.

Zone: 5

Well-drained soil.

3'-5' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Named for its three crowning attributes- flavor, productivity, and vigor. Semi-erect thornless canes bear large, flavorful berries. Consistently high yields of good quality, firm berries. Ripens from July to mid August. Grows well in any good soil which is well-drained.

Blueberry 'Bluecrop'

Vaccinium

Full sun

4'-6' tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

Zone: 4 to 7

Peaty, moist, well-drained, acidic soil.

3'-5' wide

Blueberries are not warranted.

Ripens in mid July. The standard of excellence! Considered the best all around variety for adaptability, long production period, high quality fruit, and disease resistant plants! Perhaps the most widely planted variety in the US. Yields 10 to 20 pounds per plant at maturity. Open, medium-large clusters of large bright light blue berries have a classic sweet flavor and are firm and crack resistant. Good for fresh eating, preserves, baking, and freezing. Very hardy and drought resistant. Plants have an upright, open habit. Fiery red fall color! Recommended by KSU as a good blueberry variety for Kansas!

Blueberry 'Bonus'

Vaccinium

Full sun

4'-6' tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

Zone: 4 to 7

Peaty, moist, well-drained, acidic soil.

3'-5' wide

Blueberries are not warranted.

Recommended by KSU as a good blueberry variety for Kansas! Very good productivity of very large blueberries- generally the size of a quarter to half dollar! Juicy, very sweet, bright blue fruit. Ripens in late July.

Blueberry 'Duke'

Vaccinium

Full sun

4'-6' tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

Zone: 4 to 7

Peaty, moist, well-drained, acidic soil.

3'-5' wide

Blueberries are not warranted.

Recommended by KSU as a good blueberry variety for Kansas! A vigorous, upright bush with consistently high yields. It blooms later than other varieties (which protects the buds from frost), yet it still ripens early. The medium-sized, light blue, firm fruit grows in open clusters, which makes harvesting easier. Savory sweet-tart, high-quality fruit. Ripens in late June to early July.

Blueberry 'Jelly Bean' BrazelBerries Collection

Full sun

1'-2' tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

NEW Zone: 4 to 8

Peaty, moist, well-drained, acidic soil.

1'-2' wide

Blueberries are not warranted.

The smallest blueberry plant, yet it is a powerhouse! Small white blooms in spring give way to masses of super-sweet berries in early and mid summer. Their flavor has been compared to grape jelly- very high in sugars and absolutely scrumptious! The new spring foliage emerges a neon bright shade of green. As it darkens, it acquires streaks and washes of bright red that persist into fall. When the berries sit among the red-tinted foliage, the effect is so ornamental you can't believe it is also possible to eat the fruit instead of just admiring it! Can be planted in ground or in a container at least 16" in diameter. Blueberries are acid loving; make a planting hole 1' x 1' and fill it with a peat moss slurry, then plant into this slurry.

Blueberry 'Patriot'

Vaccinium

Full sun

3'-5' tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

Zone: 3 to 7

Peaty, moist, well-drained, acidic soil.

4'-6' wide

Blueberries are not warranted.

Ripens in early July. Tight clusters of highly flavored (delicate and sweet flavor), large, slightly flat, dark blue berries, and lots of them- when mature, one bush will produce 10 to 20 pounds of fruit each year! Adaptable to many soil types and it performs better in wet soils than many other varieties. An excellent landscape variety with showy white blooms in the spring, dark green summer foliage, fiery orange, red, and yellow fall color, and bright red new wood in winter. Very vigorous bushes have a moderately upright/low growing, open, spreading habit to 5', revealing its partial lowbush parentage. Tolerates wet or dry clay soil quite well. Zone 3-7.

Recommended by KSU as a good blueberry variety for Kansas!

Berry/Small Fruit

Blueberry 'Peach Sorbet'

BrazelBerries Collection

NEW Zone: 5 to 9

Full sun

18"-24" tall

Pollinator needed? Yes, pollinate with another variety of Blueberry.

Peaty, moist, well-drained, acidic soil.

18"-24" wide

Blueberries are not warrantied.

These compact blueberry plants are four-season showstoppers with stunning leaves ranging from peach to pink to orange to emerald green. Spring's white, bell-shaped flowers will give way to an abundant summer crop of healthy, sweet blueberries mid-summer. In most climates, 'Peach Sorbet' plants keep their leaves through the winter when the foliage transitions to a rich eggplant purple.

Currant 'Cherry'

Ribes

Part to full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 3

Well-drained soil.

2'-5' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Large, dark red fruit with acid flavor. Fruit is high quality and excellent for jams, jellies, and sauces. Commonly grown commercially, but can also be used as an edible ornamental or hedge. Bears fruit well. Resistant to powdery mildew. The hardiest and best yielding currant.

Currant 'Crandall'

Ribes

Part to full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 2

Well-drained soil.

4'-5' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in mid July. Clusters of large black berries with a sweet-tart flavor that is excellent for jams, juice, and syrup. 'Crandall' has five times the vitamin C of oranges.

Elderberry Sambucus 'Nova'

Elderberry; American Elder

Full sun

6'-8' tall

Pollinator needed? Yes, use 'York'.

Zone: 4

Rich, moist soil; tolerates wet soil.

5'-7' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Large, sweet, tasty, nearly black berries are good for jelly, pie, and wine. A beautiful show of flowers in the spring. Hardy and productive bushes will grow to 6' to 8' tall. Pollinate with 'York'.

Elderberry Sambucus 'York'

Elderberry; American Elder

Full sun

6'-8' tall

Pollinator needed? Yes, use 'Nova'.

Zone: 4

Rich, moist soil; tolerates wet soil.

5'-7' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

The largest berries of any cultivated elderberry. Juicy, sweet, purplish black berries are an excellent source of Vitamin C. Good for jam, jelly, juice, pie, and wine. Large creamy white flowers in early summer and nice fall foliage. Hardy, vigorous, highly productive bushes will grow to 6' to 8' tall. Often bears in the second year. Ripens late. Pollinate with 'Nova'. Plant 7' to 8' apart.

Fig (Ficus) carica 'Brown Turkey'

Full sun

15'-25' at mat

NEW Zone: 7 to 9

Rich, moist, well-drained soil.

15'-25' at mat

Not warrantied.

Especially tasty, brownish-purple fruit produced twice each year: in late spring and late summer. Highly adaptable. Figs are often root hardy and prolific in zones 5 and 6 if planted in a sheltered location and mulched in the fall.

Berry/Small Fruit

Fig (*Ficus carica*) 'Corky's Honey Delight'

NEW Zone: 7 to 9

Full sun 10'-12' at mat

Rich, moist, well-drained soil. 10'-12' at mat Not warranted.

A semi-dwarf notable for its vigorous habit and bountiful fruit, yielding two crops of succulent green figs each year. Sweet, amber-colored flesh with a wonderful honey note. Thrives in mild coastal areas and warm humid areas, but often hardy and prolific in zones 5 and 6 as well, if planted in a sheltered location and mulched in the fall.

Fig (*Ficus carica*) 'Mission'

NEW Zone: 7 to 9

Full sun 20'-35' at mat

Rich, moist, well-drained soil. 20'-35' at mat Not warranted.

This popular variety, originating in Spain, produces especially sweet, pear-shaped fruits that ripen in summer into a rich, dark purple-black with delectable red flesh. Great for jellies and jams, and , and healthy, on-the-go snacking. Figs are loaded with flavor and vitamins. Figs are often root hardy and prolific in zone 6 if planted in a sheltered location.

Goji Berry 'Big Lifeberry' (*Lycium barbarum*)

Goji Berry

Part to full sun 10' tall

Pollinator needed? No, it is self-fertile.

Zone: 5 to 8

Well-drained soil. 5' wide

This berry has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Goji berries are the rage, popular for their antioxidants and other potential health benefits. Goji berries are easy to grow in part to full sun, although some staking may be necessary for maximum access to the nutrient-rich fruit. 'Big Lifeberry' has extra-large fruit that is perfect for home cooks. Tiny purple flowers turn into extra large fruit. Fruiting starts in August and produces until a hard frost. Goji berries can be eaten fresh or you can dry them for a sweet and tasty treat much like raisins. We recommend staking the plants, so you have full access to all of your antioxidant packed super fruit! Pruning is usually done in the winter, but you can lightly trim and shape at any time. We do not recommend trimming so much in the first year, as this is a good time to let your plant get established. Once it is established, you may trim any branches that are higher than you desire. Since Goji form a type of canopy when grown on a trellis or stake, you will want to keep the lower branches trimmed to about 12"-15" off the ground. Berries are produced on new growth, so it is advantageous to keep your plant maintained.

Gooseberry 'Captivator'

Ribes

Part to full sun 4' tall

Pollinator needed? No, it is self-fertile.

Zone: 2

Well-drained soil. 4' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

A hybrid of European and American species. Semi-thornless plants have yellow autumn foliage. Mildew resistant and very cold hardy, having originated in Canada. Large, tear-dropped shaped fruit has a sweet flavor and is colored pink to red when fully ripe. Ripens in late July. 4' tall and wide.

Gooseberry 'Pixwell'

Ribes

Part to full sun 4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 5

Well-drained soil. 5' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fruit is medium in size, pale green, becoming bright pink when ripe. Few thorns make it easy to pick. Very good for all culinary purposes. Hardy and very productive. Self-fertile.

Grape 'Canadice Seedless'

Vitis

Full sun 4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 5 to 8

Rich, well-drained soil. 6'-8' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens from mid August through September, two weeks before 'Concord'. An early red seedless variety with long, large, well-shouldered clusters that are very compact. Medium sized berries have an excellent sweet and spicy, vinous flavor. Great for fresh eating, jelly, juice, and wine. Moderately vigorous, productive vines with very good winter hardiness. Some resistance to Black Rot. To allow good wood maturity, prune excessively.

Berry/Small Fruit

Grape 'Concord Seedless'

Vitis

Full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 4

Rich, well-drained soil.

6'-8' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in mid September. Small bluish black fruits are generally seedless and have an excellent, distinctive flavor. Slightly smaller clusters and berries than the seeded 'Concord'. Vigorous and hardy. The vigor and productivity improve as the vine becomes well established. Useful variety for jelly and jam.

Grape 'Himrod Seedless'

Vitis

Full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 5

Rich, well-drained soil.

6'-8' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in late August. A yellow-gold fruited variety, having long, loose clusters of medium size berries. Hardy, high quality, seedless fruit. Excellent for fresh eating.

Grape 'Reliance Seedless'

Vitis

Full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 5

Rich, well-drained soil.

6'-8' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in early to mid August. Large, well-filled clusters of round, medium size, firm, flavorful, pinkish red seedless fruit. Well suited for fresh eating, wine, and juice.

Haskap Berry (Lonicera caerulea 'Sugar Mountain Kalinka')

Haskap

Part to full sun

5'-6' tall

Pollinator needed? Yes, pollinate with another variety of Haskap (*Lonicera caerulea*), planted within 25' of each other. (If you only plant one variety, you will get far fewer and far smaller fruit, so please plant two different varieties!)

NEW Zone: 3

5'-6' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Haskap may sound like a funny word, but this healthful, tasty fruit is no joke! Haskaps look like an oversized, elongated blueberry. They are not only easier to grow than blueberries, but they also contain far higher levels of antioxidants and three times the amount of vitamin C. Their odd name comes from the Japanese word *hasukappu*, the name under which these berries have been enjoyed for centuries in Hokkaido, Japan's northernmost prefecture. Haskaps are one of the hardiest edible plants on earth, tolerating temperatures as cold as -50 degrees F! Haskaps have a unique flavor- many compare their taste to a cross between a blueberry and raspberry or blackberry. Their texture is similar to a blueberry, however, and the skin is very thin, soft, and melts in your mouth! 'Sugar Mountain Kalinka' produces very high yields of large, sweet fruits, up to 1" long. A good pollinator for the other 'Sugar Mountain' varieties. Haskaps can be eaten fresh right from the bush, cooked into jam, pressed for juice, or made into sauce or pie filling. They can also be dried or frozen to enjoy later! Berries are produced on old wood, so prune plants only immediately after harvest. Do not prune plants at all until they have been planted for at least three years. Please ask for a detailed information sheet that has planting, growing, and harvesting information!

Haskap Berry 'Sugar Mountain Blue' (Lonicera caerulea)

Haskap

Part to full sun

5'-6' tall

Pollinator needed? Yes, pollinate with another variety of Haskap (*Lonicera caerulea*), planted within 25' of each other. (If you only plant one variety, you will get far fewer and far smaller fruit, so please plant two different varieties!)

Zone: 3

Well-drained soil.

5'-6' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Jostaberry Jostaberry

Ribes

Full sun

4'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 3

Well-drained soil.

4' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

A cross between a black currant and a gooseberry. It has the vigorous growth habit and the disease resistance of the black currant. The leaves are gooseberry-like and the fruit, until ripe, looks like a gooseberry. In late June, the fruit ripens and the elongated fruit turns black. The flavor is sweet like a gooseberry, with a hint of black currant. Vigorous plants with high yields.

Kiwi arguta- Female

Actinidia arguta

Part to full sun

6'-10' tall

Pollinator needed? Yes, use a Male.

Zone: 4

Rich, well-drained, acidic soil.

4'-10' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

This is the female variety. A female and male vine are needed to produce fruit, although one male can pollinate up to eight surrounding females. Vines should be spaced about 10' apart and require a trellis for support. The vines should be planted in a sunny location and protected from the wind as much as possible. The female vines produce fragrant flowers resembling those of a Clematis, and bear heavy clusters of oval fruits. The smooth-skinned fruits are egg-shaped and average 3/4" to 1 1/2" in diameter. The fruit has edible skin and is very high in vitamin C (almost 20 times as much as an orange). Ripens in September. Kiwis grow best in well-drained soil with a pH of 5.5 to 6.8

Kiwi arguta- Male

Actinidia arguta

Part to full sun

6'-10' tall

Pollinator needed? Yes, use a Female.

Zone: 4

Rich, well-drained, acidic soil.

4'-10' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

This is a male variety to pollinate the female. Beautiful green foliage. A female and male vine are needed to produce fruit, although one male can pollinate up to eight surrounding females. Vines should be spaced about 10' apart and require a trellis for support. The vines should be planted in a sunny location and protected from the wind as much as possible.

Raspberry 'Canby Thornless'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 4 to 7

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Thornless Red Raspberry. Large, good flavored, firm, juicy, bright red berry with fine quality. This delicious flavored berry is one of the best for freezing, canning, cooking, and fresh eating. Vigorous and productive canes bear heavy crops in the spring. The plants show a high level of disease and aphid resistance. Must have well drained soil.

Berry/Small Fruit

Raspberry 'Fall Gold'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 4

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

The first crop ripens in July and the second crop ripens in August. Golden yellow fruit is very sweet, juicy, and firm. Extra large conical berries are borne in large clusters. Hardy and very productive. Excellent for all purposes.

Raspberry 'Heritage'

Rubus

Full sun

5'-6' tall

Pollinator needed? No, it is self-fertile.

Zone: 4

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

First crop ripens in mid July, and the second crop ripens the first of September. Often bears the first September after planting. Excellent quality, large, sweet, dark red berries have very good flavor. Fruit remains in good condition on the plant, even when overripe. Excellent for all purposes. Very vigorous plants that are hardy, erect growing, sturdy, and sucker prolifically. Fairly tolerant of heavier soils.

Raspberry 'Jewel'

Rubus

Full sun

4' tall

Pollinator needed? No, it is self-fertile.

Zone: 4

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

This cross of 'Bristol' and 'Dundee' combines hardiness with high yields, vigor, and disease resistance. Extra large, juicy, glossy black berries are of good quality and appearance, with rich black raspberry flavor. Produces big harvests of highly flavored, firm berries in early July over a short period, so it's ideal for preserves. Also great in pies. After harvesting, remove the canes down to the ground.

Raspberry 'Latham'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 3

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in late June to early July. Very large, firm, red berries. Good for fresh eating, canning, freezing, jam, juicy, and pie. Disease resistant.

Raspberry 'Munger'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 3

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Ripens in July. Large, plum yet firm, shiny black berries that are not seedy. Delicious, sweet berries are excellent for jams, jellies, and preserves. Not recommended for freezing.

Raspberry 'Nova'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 3 to 8

Well-drained soil.

3'-4' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Vigorous growing and hardy with respect to fluctuating winter temperatures. Upright canes with long fruiting laterals. Plants are high-yielding with bright red fruit that is firm and suitable for fresh eating, preserves, and freezing. The fruit is medium sized and somewhat acidic in taste. The fruit is considered to have better than average shelf life. Very hardy canes are nearly spineless in floricanes and resistant to most cane diseases, including rust. The floricanes bear in June. The primocanes bear a small fall crop later than 'Heritage'. Has good heat tolerance.

Berry/Small Fruit

Raspberry 'Royalty'

Rubus

Full sun

4'-5' tall

Pollinator needed? No, it is self-fertile.

Zone: 4 to 8

Well-drained soil.

2'-3' wide

This berry bush has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Large, firm, round, very sweet purple berries. 'Royalty' has a dual picking time- full red stage with a real red raspberry flavor, or a later purple stage with a stronger, sweet purple raspberry flavor. High quality fruit that is good for fresh eating. The tartness of 'Royalty' also makes it good for jams, jellies, and freezing. Vigorous, productive canes are very resistant to insects. Ripens in early to mid summer. Purple Raspberries are a cross between red raspberries and blackcaps (black raspberries).

Rhubarb 'Crimson Cherry'

Full sun

2' tall

Zone: 4

Rich, moist, well-drained soil.

3' wide

Not warranted.

The reddest variety. The stalks tend to be red all the way through. The crowns must be planted shallow- 1/4 to 1/3 of the crown surface should be above ground level. Do not harvest from the plants the first year. Harvest stalks when they are 8" to 10" tall, gently pulling out and up on the stalks. Harvest the largest stalks first. Do not eat the leaves, as they are poisonous. Zone 4. \

Rhubarb 'Crimson Cherry'

Full sun

2' tall

Zone: 4

Rich, moist, well-drained soil.

3' wide

Not warranted.

The reddest variety. The stalks tend to be red all the way through. The crowns must be planted shallow- 1/4 to 1/3 of the crown surface should be above ground level. Strawberry, Everbearing, day neutral 'Seascape'

Full sun

6" tall

Zone: 4 to 8

Moist, well-drained soil.

2' wide

Not warranted.

This day neutral variety is very productive and bears large, round berries that have a very sweet flavor when picked ripe from the plant. Plants should be planted in well-drained soil with adequate irrigation. Good for containers. Zone 4-8.

Strawberry, Everbearing, day neutral 'Tribute'

Full sun

6" tall

Zone: 4 to 8

Moist, well-drained soil.

2' wide

Not warranted.

Plump, juicy, medium to large, firm fruit. During the first year, it will bear well in September. In following years, it will bring forth a heavy spring crop, and then continues to bear at approximately six week intervals through summer and fall. Best of all, the "drop off" in berry size and quality that's typical of other Everbearers does not happen with 'Tribute'. In late summer and fall, berries increase in size and quality. Resistant to red stele and Verticillium wilt.

Strawberry, June bearing 'Allstar'

Full sun

6" tall

Zone: 3 to 8

Moist, well-drained soil.

2' wide

Not warranted.

'Allstar' produces a good crop of very large, light orange-red colored, sweet berries with delicate skin and an almost perfect strawberry shape! Glossy, firm fruit makes this variety a good choice for home gardeners. Its excellent fresh eating quality will appeal to you. Also excellent for freezing and preserves. This widely adapted variety has performed consistently well in the Midwest. Highly resistant to red stele, with intermediate resistance to Verticillium wilt, powdery mildew, and leaf scorch. Ripens late mid-season. Zone 4-8.

Strawberry, June bearing 'Cavendish'

Full sun

6" tall

Zone: 3 to 8

Moist, well-drained soil.

2' wide

Not warranted.

High yields of very large, firm, bright red berries ripen over a long growing season. The excellent flavor and overall quality of the fruit make this variety a good choice for home gardens. The fruit is excellent for all uses. Very winter hardy. Highly resistant to red stele and has some resistance to Verticillium wilt. Zone 3-8.

Berry/Small Fruit

Strawberry, June bearing

Full sun

6" tall

'Earliglow'

Zone: 4 to 8

Moist, well-drained soil.

2' wide

Not warranted.

Wonderful strawberry flavor" is this variety's trademark. It sets the standard for traditional strawberry taste! Excellent for fresh eating and freezing due to the sweetness of its berries. So sweet that no extra sugar is needed! 'Earliglow's dark red fruit has tough, glossy skin and firm flesh. The first and second pickings are nice, medium to large sized berries. The fruit size decreases as the season progresses, so the later pickings are perfect for jams and freezing. Bears early in the season. 'Earliglow' plants are very vigorous and runner well. Good resistance to red stele and intermediate resistance to Verticillium wilt and leaf scorch. Zone 4-8.

Strawberry, June bearing

Full sun

6" tall

'Surecrop'

Zone: 4 to 8

Moist, well-drained soil.

2' wide

Not warranted.

Large yields of delectable June-bearing berries! Very heavy yielding, adaptable, and disease resistant. Berries are rich and sweet, bearing 1 quart or more berries per plant. Self pollinating and very vigorous.

Tree- Fruit

Apple '5-N-1' Med Chill-semi dwarf (5 of these varieties: Arkansas Black, Yellow Delicious, McIntosh, Honeycrisp, Mutzu, Jonathan)

Full sun 15'-20' tall

Pollinator needed? No, the five varieties on this tree will cross-pollinate. These varieties are midseason and late season bloomers, so it will pollinate other midseason and late season bloomers.

NEW Zone:

Moist, well-drained soil. 18' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

'Arkansas Black' is a hardy, late maturing apple that is very distinctive. The deep ruby red skinned fruits keep up to 9 months in refrigeration! Fruit exposed to full sun develops a waxy sheen from ruby black to jet black, a showy contrast to the firm golden flesh inside. The flavor is sprightly, full of gusto, perfect for baked apples, spiced apple slices, sauces, and pies. Ripens in mid to late October. 'Yellow Delicious' bears large, conic fruit with golden yellow skin. Firm, crisp, juicy flavorful flesh. Sweet, full flavored, all-purpose apple. Ripens in late September. 'McIntosh' bears medium sized fruit has bright red skin, sometimes tinged with green. Very aromatic, flavorful, very juicy, tart, firm, and crisp white flesh. A good all-purpose apple, especially for fresh eating, cider, baking, and cooking, though it doesn't hold up to lengthy cooking. Ripens in September. 'Honeycrisp' bears oblate to round fruit that is consistently large, averaging 3" or more in diameter. The skin is splashed and slightly striped scarlet-red over a pale yellow background. The cream colored flesh is explosively crisp, melting, juicy, and coarse grained; it has a mildly sweet, delicate flavor that is slightly aromatic and has plenty of juice! 'Mutsu' bears round apples that are truly golden on the outside, sometimes with a touch of orange. The crunchy, juicy, tart flesh is yellowish white and rather coarse. The remarkable flavor is very similar to 'Yellow Delicious', and has the barest hint of anise, and is always delicately spicy, crisp, and juicy. Resists russetting. Keeps well in storage without shriveling. 'Jonathan' bears medium to large, bright red fruit has crisp, white flesh that is tinged yellow. Flavor is slightly subacid. Bears young, annually and heavily. Good for fresh eating and cooking. Stores well. Ripens in early October. No additional pollinating tree is needed since these varieties will pollinate each other.

Apple 'Campbell Red Delicious'- semi-dwarf

Malus pumila Full sun 15'-20' tall

Pollinator needed? This is a Midseason Bloomer, pollinate it with another variety that is a Midseason Bloomer.

Zone: 4 to 8

Moist, well-drained soil. 18' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

One of the most widely planted 'Red Delicious' strains. A spur-type tree with a very compact growth habit. Fruits are red striped with a conical shape and of excellent quality when ripe. Productive trees. Has some susceptibility to apple scab. Has resistance to fire blight, cedar apple rust, and powdery mildew. Mid-season bloomer. Ripens in mid to late September.

Apple 'Fuji' semi dwarf

Malus pumila Full sun 15'-20' tall

Pollinator needed? This is a Midseason Bloomer, pollinate it with another variety that is a Midseason Bloomer.

Zone: 5 to 8

Moist, well-drained soil. 18' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Medium to large, oblate to round fruit is yellowish green with an orangish red flush and darker stripes. Cream colored flesh is extraordinarily crisp and juicy with a delightful aroma- even after 12 months in refrigeration! 'Fuji' ripens late, but due to its high sugar, it develops a good flavor. Moderately vigorous grower that bears at an early age. Ripens in mid to late October. Requires a midseason pollinator.

Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

To improve 'Yellow Delicious', Japanese hybridizers crossed 'Yellow Delicious' with 'Indo'. The resulting 'Mutsu' is usually larger than 'Yellow Delicious', and is round and truly golden on the outside, sometimes with a touch of orange. The crunchy, juicy, tart flesh is yellowish white and rather coarse. The remarkable flavor is very similar to 'Yellow Delicious', and has the barest hint of anise, and is always delicately spicy, crisp, and juicy. Resists russeting. Keeps well in storage without shriveling. A popular dual purpose apple. Since its introduction in the late 1940's, this variety has pleased the processing trade and the fresh fruit marketplace. It is pollen sterile, so it will not pollinate other varieties. Requires a midseason pollinator. Ripens in early to mid October.

Apple 'Red Delicious'- semi dwarf	Malus pumila	Full sun	14'-16' tall	Pollinator needed? This is a Midseason Bloomer, pollinate it with another variety that is a Midseason Bloomer.
Zone: 5		Moist, well-drained soil.	14'-16' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Sweet, red 4" apples keep well. Best for fresh eating. Ripens in late September or early October. Requires a late season pollinator or use a 'Yellow Delicious' variety.

Tree- Fruit

Apple Stark Ultra Gold-semi dwarf	Malus pumila	Full sun	15'-20' tall	Pollinator needed? This is a Midseason Bloomer, pollinate it with another variety that is a Midseason Bloomer.
Zone: 5		Moist, well-drained soil.	18' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

This smooth, glossy-skinned golden apple originated in Stark Bro's test orchard. It is a large russet-resistant, golden apple that is slightly more conical than the original 'Golden Delicious', with flavor to match. The fruit has better storage life than 'Golden Delicious' and is less susceptible to shriveling. 'Stark UltraGold' fruit ripens in late 'Golden Delicious' season (late September to early October). Requires a mid to late season pollinator.

Pawpaw triloba (Asimina)	Pawpaw	Part to full sun	15'-20' tall	Pollinator needed? Yes, plant multiple plants of the seedgrown Pawpaw for pollination.
Zone: 5 to 9		Moist, well-drained soil.	15'-20' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

The tropical looking, droopy, 6" to 12" long dark green leaves provide a sleepy, "shut-eye" aura to the summer landscape. 1" wide dark reddish-purple flowers emerge from hairy brown buds before the leaves in April and May. The flowers are followed by edible, waxy, banana-shaped fruits, 2" to 5" long in September and October. The fruit are greenish yellow, maturing to black. The fruit emits an aromatic fragrance and have a banana-like taste and custard-like texture. Several large seeds are found in each fruit. The fruit is eaten raw, baked, or used as a filling for pies, or in ice cream, breads, and cookies. Mature trees will yield 25-50 pounds of fruit each year. Plant two trees for proper pollination. The rich green leaves turn spectacular golden hues in the fall. Prefers moist, well-drained soils.

Pawpaw triloba 'Pennsylvania Gold'	Pawpaw	Part to full sun	15'-20' tall	Pollinator needed? Yes, pollinate with any other variety of PawPaw.
NEW Zone: 5 to 9			15'-20' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Medium to large, extra sweet, flavorful fruit with yellow flesh. It is one of the earliest varieties to ripen, and it produces a good crop. Mature trees will yield 25 to 50 pounds of fruit. Ripens in late September. Grows in almost any kind of neutral soil.

Pawpaw triloba 'Susquehanna'	Pawpaw	Part to full sun	15'-20' tall	Pollinator needed? Yes, pollinate with any other variety of PawPaw.
NEW Zone: 5 to 9			15'-20' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

An outstanding Peterson Pawpaw. Fruits are outstanding for combining very large size with rich pawpaw flavor, great sweetness, exceptional fleshiness, and firm buttery texture. Fruit sometime weigh over a pound. With a firm texture similar to an avocado, and a thickish skin, the fruit is less fragile than most other varieties. It has the fewest seeds of any variety (3% by weight). Moderate to good yields. Responds well to pruning. An especially beautiful ornamental specimen tree in the home landscape.

Tree- Fruit

Pawpaw triloba 'Wells'	Pawpaw	Part to full sun	10'-25' tall	Pollinator needed? Yes, pollinate with any other variety of PawPaw.
NEW Zone: 5 to 9			6'-10' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Nutritious as well as delicious, the greenish yellow 3" to 6" Pawpaw fruit is high in protein and a good source of vitamins and minerals. Ornamental tree has unusual dark purple flowers that appear before the large tropical looking foliage.

Peach 'Belle of Georgia'- semi dwarf'		Full sun	15'-18' tall	Pollinator needed? No, it is self-fertile.
NEW Zone: 5 to 8		Moist, very well-drained soil.	15' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Remember to spray your dormant Peach trees with Lime Sulfur Spray to prevent Peach Leaf Curl (either soon after the leaves have dropped in the fall or in late winter before the leaf buds begin to swell at all. Do not use oil in your Lime Sulfur Spray & apply Lime Sulfur spray when temperatures are between 45 and 80 degrees F). Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

If you only have room for one peach tree in your yard, this is the variety for you. These pink-blushed, white-fleshed peaches are exceptionally sweet and delicious, making them a favorite for snacking. Self-pollinating trees produce lovely, bright pink flowers in spring and bear crops of large, juicy freestone peaches in late August.

Peach Red Haven- semi dwarf	Prunus	Full sun	15'-20' tall	Pollinator needed? No, it is self-fertile.
NEW Zone: 5 to 8		Moist, very well-drained soil.	15'-20' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Attractive, bright red, nearly fuzzless fruit is yellow-fleshed. Flavorful, sweet, and firm. The fruit is not fully freestone until ripe. Great for fresh eating, canning, and freezing. Vigorous, very hardy, strong growing trees are disease resistant. Abundant fruit set; requires early thinning. Ripens in late July. Self-fertile.

Pear Bartlett- semi dwarf	Pyrus communis and Pyrus pyrifolia	Full sun	18'-20' tall	Pollinator needed? Yes, pollinate with any other variety of European Pear.
Zone: 5 to 8		Rich, well-drained soil.	25' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

The most popular pear variety in the U.S.A. Golden yellow skin is blushed with brownish red. Large fruit has smooth, juicy, sweet flesh with a pleasant touch of tartness. For fresh eating and canning. Vigorous grower. Bears at a young age and is normally long-lived. Ripens in late August to early September. Do not pollinate with 'Seckel'.

Tree- Fruit

Pear 'Chojuro' (Asian)-semi dwarf

NEW Zone: 5 to 8

Full sun

8'-10' tall

Pollinator needed? Yes, pollinate with 'Bartlett' or any other variety of Asian Pear.

Rich, well-drained soil.

6'-7' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Fruit keeps for up to 20 weeks. A popular variety known for its butterscotch flavor. Green- to yellow-brown russeted skin surrounds crisp, juicy, flavorful white flesh. Similar to grocery store Asian pears, but homegrown tastes so much better! Pick when first yellow-brown in color, generally late August. Best pollinators are any other Asian pear or 'Bartlett'.

Pear 'Fan Stil'

Pyrus

Full sun

15'-20' tall

Pollinator needed? Yes, pollinate with any other variety of European Pear.

Zone: 5 to 9

Moist, well-drained soil.

18' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

The most fireblight resistant of the pears. Medium, bell-shaped pears have creamy canary yellow skin with a slight red blush. Vigorous, upright trees bear consistently heavy crops of delicious pears in late August into September. The sweet, crisp, and juicy white fleshed fruit is great for fresh eating! Pollinate with another European Pear.

Pear Kieffer- standard

Pyrus

Full sun

20'-35' tall

Pollinator needed? Yes, pollinate with any other variety of European Pear.

Zone: 5

Rich, well-drained soil.

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Medium to large fruit has coarse textured, crisp, juicy white flesh with a musky aroma. Greenish yellow skin with a crimson blush. Fruit should be picked when it is hard-ripe and allowed to reach its flavor peak stored in a cool place. Stores well. Excellent for canning. Long lived trees- proof of their hardiness and blight resistance. Self-fertile, though it will set better crops if cross-pollinated with another European pear. A good pollinator. Ripens in mid October.

Pear 'Luscious'

Pear

Full sun

12'-15' tall

Pollinator needed? Yes, pollinate with any other variety of European Pear.

Zone: 4 to 8

Rich, well-drained soil.

12'-15' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

'Luscious' pear is very hardy and resistant to fire blight. It is an excellent dessert pear, but not well suited to canning. The fruit is medium size, bright yellow with a little red blush. Juicy flavor is similar but more intense than Bartlett. It is a juicy, pleasant and sweet flavored pear that is good for northern, cold climates. It ripens in late September.

Tree- Fruit

Pear 'Shinko' (Asian)- semi dwarf

NEW Zone: 5 to 8

Full sun

12' tall

Pollinator needed? Yes, pollinate with any other variety of Asian Pear.

Rich, well-drained soil.

10'-12' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Excellent quality pears are juicy, sweet, flavorful, refreshing, crisp like an apple. Golden brown russeted skin. Very resistant to fireblight. Ripens in early September. Pollinate with any other variety of Asian pear.

Plum 'Santa Rosa'

Prunus

Full sun

8'-10' tall

Pollinator needed? No, it is self-fertile. It will pollinate other Japanese Plums.

NEW Zone: 5

Moist, very well-drained soil.

5'-7' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Remember to spray your fruit trees with Fruit Tree Spray, every 10 to 14 days, beginning when at least 80% of the petals have fallen. Use Hi-Yield Spreader Sticker when you mix up your Fruit Tree spray. Always read & follow label instructions. Please ask any staff member for assistance with fruit tree sprays. Fertilize your fruit trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Japanese Plum. A very important commercial and home variety. White flowers in spring, followed by large, attractive, good quality, large, oval-shaped plums. Reddish purple skin with red-streaked amber flesh. The firm flesh is yellow to dark red near the skin. Juicy, tangy, and flavorful fruit is rich and pleasing. The fruit stores and ships well. The trees are a moderate grower, with a spreading growth habit. Pale, reddish green foliage turns purple-red in the fall. Ripens in mid to late June. Self-pollinating, and a good pollinator.

Tree- Nut

Pecan Carya 'Colby' (grafted)	Carya illinoensis; Northern Pecan	Full sun	50'-100' tall	Pollinator needed? Yes, pollinate with another variety of Pecan.
Zone: 5 to 9		Deep, rich, moist, well-drained soil.	40'-75' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fertilize your pecan trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Very hardy. Long oval nut. Excellent flavor. Grows quickly and bears at a young age, producing bushels of delicious, meaty, thin-shelled nuts. Super-rich golden kernels- 72% nut oil, most of which is unsaturated fat. Averages 66 nuts per pound. 44% kernel. Arguably the best variety for baking. Self-pollinating, but it will bear heavier crops if cross pollinated with another variety. Pecan trees are wind pollinated and can cross-pollinate with trees up to 1/4 mile away. Ideally, pecans should be planted within 300 feet of another variety or a native tree. Zone 6. Grafted.

Pecan Carya 'Kanza' (grafted)	Carya illinoensis; Northern Pecan	Full sun	50'-100' tall	Pollinator needed? Yes, pollinate with another variety of Pecan.
Zone: 5 to 9		Deep, rich, moist, well-drained soil.	40'-75' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fertilize your pecan trees with Fruit, Citrus, and Pecan Tree Fertilizer.

High quality nuts that ripen before other varieties. Golden kernels. Cold hardy, disease resistant. Selected primarily for the northern pecan belt because of its superior cold hardiness and early harvest date. Excellent scab resistance. Averages 77 nuts per pound. 54% kernel. Plant two or more varieties to insure good pollination. Pecan trees are wind pollinated and can cross-pollinate with trees up to 1/4 mile away. Ideally, pecans should be planted within 300 feet of another variety or a native tree. Grafted.

Pecan Carya 'Kiowa' (grafted)		Full sun	60'-80' tall	Pollinator needed? Yes, pollinate with another variety of Pecan.
NEW Zone:		Deep, rich, moist, well-drained soil.	60'-80' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fertilize your pecan trees with Fruit, Citrus, and Pecan Tree Fertilizer.

Nuts are large and oblong. Bears early and heavy crops of excellent quality nuts. Shapely tree with attractive foliage.

Pecan Carya 'Lakota' (grafted)	Carya illinoensis; Northern Pecan	Full sun	70'-100' tall	Pollinator needed? Yes, pollinate with another variety of Pecan.
Zone: 5 to 9		Deep, rich, moist, well-drained soil.	40'-75' wide	This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Fertilize your pecan trees with Fruit, Citrus, and Pecan Tree Fertilizer.

The nut is oblong elliptical with an acute apex, and rounded base and is round in cross section. There are 59 nuts/lb, with 62% kernel. Kernels are cream to golden in color, with medium, non-trapping dorsal grooves and rounded dorsal ridge. Nuts shell out easily into full halves and are very attractive. Time of spring budbreak is similar to 'Kanza' and 'Pawnee'. 'Lakota' is protogynous, with early to mid-season receptivity and mid to late season pollen shed (similar to Kanza). 'Lakota' should be a good pollenizer for, and be well-pollenized by, 'Pawnee', 'Osage', and 'Giles'. Time of nut maturity is early, about the same time as 'Giles', and about two weeks after 'Pawnee'. 'Lakota' has performed well in tests in the northern pecan production areas of Kansas, Missouri, and Oklahoma. Trees are vigorous, upright in growth habit and develop strong limb angles and a wind-resistant tree structure. 'Lakota' is very resistant to scab disease.

Fertilize your pecan trees with Fruit, Citrus, and Pecan Tree Fertilizer.

An excellent pecan cultivar. Resistant to scab and offers early nut maturation. Highly recommended for planting in Kansas. Excellent flavor and cracking quality. Averages 63 nuts per pound. 54% kernel. Kernels are light brown in color, with prominent secondary dorsal grooves. Plant two or more varieties to insure good pollination. Pecan trees are wind pollinated and can cross-pollinate with trees up to 1/4 mile away. Ideally, pecans should be planted within 300 feet of another variety or a native tree. Grafted.

Tree- Nut

**Walnut Juglans regia
'Carpathian'**

Carpathian English
Walnut, Persian
Walnut

Full sun

60'-70' tall

Pollinator needed? No, it is self-fertile.

Zone: 4 to 8

Well-drained soil.

35'-40' wide

This tree has a 1 year warranty OR a 5 year warranty with the purchase of MYKE tree & shrub (on the same receipt)! For warranty details, please ask for a Tree & Shrub Warranty brochure at the checkout.

Carpathian walnut is known for its outstanding nut, qualities and fine wood and aesthetic characteristics. Carpathian walnuts mature one to four weeks prior to when the hull opens. However, they are usually harvested before this when the seed coat is a light tan color. The trees do produce juglone (like black walnuts), which can inhibit the growth of other plants.
